plot

```
Plot[Sin[x], {x, 0, 2 Pi}]
```

```
f[r_] := 1-2*M/r
```

```
f[r]
```

Out:

$$1 - \frac{2\,M}{r}$$

```
Series[1 - (2*M)/r,{r,Infinity,2}]
```

Out:

$$1 - \frac{2\,M}{r} + O\left[\frac{1}{r}\right]^3$$

```
Integrate[x^2,{x,0,b}]
```

Out:

$$\frac{b^3}{3}$$

```
?Series
```

Symbol

Series[f, {x, x_0, n}] generates a power series expansion for f about the point $x = x_0$ to order $(x - x_0)^n$, where n is an explicit integer.

Series[f, $x \to x_0$] generates the leading term of a power series expansion for f about the point $x = x_0$.

Series[f, {x, x_0, n_x}, {y, y_0, n_y}, ...] successively finds series expansions with respect to x, then y, etc.

```
Integrate[Sin[x]^2, {x, 0, Pi}]
```

Out:

$$\frac{\pi}{2}$$
